COURSE OVERVIEW

The Advanced Certificate in Security Management training program can be delivered on site or in a training room with numerous scenario and practical assignments to be completed. This program is an internationally recognized qualification by both, higher learning Institution and Government.

Our training program uses tested and true methods, advanced technology combined with relevant practical experience, train your staff on best practices in security, recognise potential threats and equip them, if necessary, to respond to security risk situations.

We deliver some of the most comprehensive and professional (fully accredited) Security courses available. Students will receive face to face trainer led theory classes, and practical sessions involving small groups and individual activities.

We use the Problem Based Learning (PBL) concept on the last session of each day. This concept requires officers to be provided with a security problem and then they demonstrate how they would deal with that problem whilst being guided by an instructor.

Our aim is to train highly motivated and professional security managers & leaders to a standard which far exceeds requirements.

“ **Amateurs train until
they get it right,
Professionals train until
they cannot get it wrong** ”

The Advanced Certificate in Security Management course is designed and delivered for any industry where there is a potential risk to their employees or infrastructure from internal and external threats.
